

Core Competency's

AUDIENCE RESPONSE SYSTEM

Add technology, interactivity and measurement to your events and trainings...

Our **Audience Response System (ARS)** is a powerful tool to enable each individual in your audience to share his/her views seamlessly with a wireless voting keypad. Voting results are then instantly displayed on screen to provide instant feedback or to provoke discussion.

The ARS empowers you to engage and assess your team as learning happens. Through the use of real-time questioning, result aggregation and visualization, you can enhance the learning experience as well as the learning outcome.

ARS also provides a way to vote on various issues anonymously. This helps resolve conflicts and allows everyone in the meeting to voice their opinion without having to worry about others knowing what they voted for.

Whether you're looking for **Audience Response System** purchases, rentals or staffed service, we have an option that will fit your budget and match your unique goals and objectives.

Where can I use Audience Response System?

In Events/Conferences:

Audience Response Systems can be used for customer surveys, feedback polls, keynote presentations or workshops.

For Education/Training:

Audience Response Systems can be used for a more engaged learning / training in academic classrooms or any sort of training sessions.

In Advertising Research:

Audience Response Systems can monitor how people feel about new products by allowing members of the audience to take quick opinion surveys.
